## Population Health Management

Introduction to the underlying concepts, data and analysis required to understand and improve the population's health

This course has been developed to support analysts and other health and care professionals working in population health to build their knowledge and skills within this area. Population health management (PHM) is central to the development of Integrated Care Systems (ICSs) and Strategic Transformation Partnerships (STPs) and is a new focus of analytical work for analysts working across these partnerships.

## Maximising Population Health and Prevention in Curricula Guidance

The toolkit to maximise population health and prevention in curricula aims to support educators of all regulated health and care professionals, to maximise population health and prevention-learning in their respective curricula.

It is a combination of easy-to-use guidance with signposting to reputable learning resources in the field of population health and prevention and a platform to showcase good practice examples
